## IN THE CLAIMS:

1. - 20. (Cancelled) 1

3

- 21. (New) A padfolio having an exterior pocket along an exterior cover comprising: 1
- a pair of opposing covers joined together by a spine on an edge of each of the op-2 posing covers;
- the exterior pocket being located on an exterior surface of one of the opposing 4
- covers, wherein the pocket is formed by a flap joined along a base edge, the base edge 5
- being joined the exterior surface adjacent to the spine; 6
- the flap including a front edge unjoined to the exterior surface and thereby con-7
- structed and arranged to receive documents through the front edge, the flap further in-8
- cluding two side edges, each side edge having a recess taper to partially reveal whether at 9
- least a single document is held within the pocket while the flap is tensioned against the 10
- exterior surface; and 11
- a pair of elastic strips connected between each side edge, respectively, and the 12
- exterior surface, the elastic strips generating tension and being constructed and arranged 13
- to maintain a holding friction against the documents, and the front edge and the two side 14
- edges being unattached to the cover except by the pair of elastic strips while a region in 15
- which documents may be viewed is visible along the side edges remote from the straps. 16
- 22. (New) A padfolio with an exterior pocket along an exterior cover comprising: 1

- a flap attached adjacent to the spine of the padfolio, where the flap creates a base
- 3 edge adjacent to the spine, to side edges, and a front edge;
- 4 the front edge unattached to the exterior cover, and the front edge being adapted
- to allow documents to slide into the pocket through the front edge;
- an outer perimeter edge stitched on the exterior cover in an approximately rectan-
- 7 gular shape with one side adjacent to the base edge and the approximately rectangular
- shape being slightly larger then the flap; and
- the two side edges being unattached except by a pair of elastic strips attached be-
- tween plies of the flap and the outer perimeter edge, and the two side edges including a
- taper defined as a gap between the outer perimeter edge and the side edge being wider at
- the base edge and narrower at the front edge, the taper partially revealing at least a single
- document within the pocket when the flap is tensioned against the exterior cover by the
- elastic straps.
- 1 23. (New) The padfolio of claim 22, wherein the elastic strips being configured with a
- width less than half a length of the side edge.
- 24. (New) The padfolio of claim 22, wherein the gap being configured by a width of the
- 2 base edge being greater then a width of the front edge.
- 1 25. (New) The padfolio of claim 24, wherein the gap being generated by an angle be-
- tween approximately 2 and 5 degrees.
